SOV. CH. KEM. ZH. 1976, Abs. 30179

AUTHORS: Antipova-Karntayeva, I. I.; Kutsenko, Yu. I.

TITLE: Study of solvation processes from electronic absorption spectra of salts of coelectronic pairs of ions Ti^{3+} - Cu^{2+} and Cr^{3+} - Co^{2+} .

EDITOR IN CHIEF: Dr. V. S. po spektroskopii, V. V. Shch., v. 1, no. 1, 1976.

TOPIC TAGS: solvation, absorption spectrum, electronic spectrum, coelectronic pair

TRANSLATION: From the electronic absorption spectra of salts of coelectronic pairs of ions Ti^{3+} - Cu^{2+} and Cr^{3+} - Co^{2+} in mixed solvents $C_2H_5CH_2Cl$, $C_2H_5CO-C_2H_5$, and acetone-H₂O in the 10,000--10,000 cm^{-1} region, it was established that the change in the composition of the solvents does not affect the absorption spectra of the salts of the coelectronic pairs. The absorption spectra of the salts of the coelectronic pairs of ions Ti^{3+} - Cu^{2+} and Cr^{3+} - Co^{2+} in the mixed solvents are similar to those in pure acetone. The absorption spectra of the salts of the coelectronic pairs of ions Ti^{3+} - Cu^{2+} and Cr^{3+} - Co^{2+} in the mixed solvents are similar to those in pure acetone.

TITLE: Spectra of trivalent chromium complexes in crystals of $\text{AlCl}_3 \cdot 6\text{H}_2\text{O}$

SOURCE: Fizika tverdogo tela, v. 7, no. 9, 1965, 2712-2716

TOPIC TAGS: aluminum chloride, spectrum analysis, EPR spectrum, crystal theory, crystal optic property

ABSTRACT: The authors study crystals of $\text{AlCl}_3 \cdot 6\text{H}_2\text{O}$ with an isomorphic impurity of trivalent chromium to determine the mechanism responsible for binding of an impurity ion in the surrounding crystal lattice. The crystals were grown from solutions containing aluminum chloride and chromium chloride. The specimens were studied by spectrophotometry in the visible and ultraviolet regions, and by electron paramagnetic resonance. The preparation of the specimens and equipment used in making the measurements are briefly described. A model is given for the energy levels of a Cr^{3+} ion in crystal fields of various symmetry. The absorption spectra of all crystals in polariz-

Card 1/2

L 9249-66

ACC NR: AP5022710

ed light showed two wide bands in the visible region and one in the ultraviolet. The spectral parameters Δ and K were determined, where Δ is the energy difference between the " A_{2g} " and " T_{2g} " levels, and K is the value of splitting of the " T_{2g} " and " T_{1g} " levels in an axial field. The constant of spin-orbital interaction λ was also determined from the spectral measurements. The results are tabulated. The parameters of the electron paramagnetic resonance spectra for the various crystals studied are given. It is found that binding of the impurity ion in this type of crystal is determined both by the lattice structure and by the state of the ion in the mother liquor. Further research on this problem is recommended. Orig. art. has: 3 figures, 3 tables.

HANDB-TEODORESCU, VERONICA

The Elementary Solution of the Equation of Partial Derivatives of the 4th Order

Anton-Teodorescu, Veronica. La solution élémentaire
de l'équation aux dérivées partielles d'ordre IV, à caractéristique double. An. Univ. "C. I. Parhon" Bucureşti.
Ser. Sti. Nat. 6 (1957), no. 15, 9-24. (Romanian.
French and Russian summaries)

The subject of this paper is a linear homogeneous partial differential equation in an m -dimensional Riemann space when m is an odd number. The equation is of the form $\Delta_2^m w + \dots = 0$, where Δ_2 is Beltrami's second differential parameter and dots indicate terms involving derivatives of order ≤ 3 . If $\Gamma = 0$ is the equation of the characteristic conoid, an elementary solution is obtained in the form

$$\Gamma^{1-m/2} \sum_{i=0}^{\infty} \phi_i \Gamma^i.$$

The ϕ_i are functions of a single variable s . They satisfy linear differential equations of the second order with singularities of the first kind at $s=0$, and they are analytic inside and on the characteristic conoid.

A. Erdelyi (Pasadena, Calif.)

Elementary Solution of a Fourth Order Partial Differential Equation

4707:

Antohi-Teodorescu, Veronica. La solution élémentaire
d'une équation aux dérivées partielles du quatrième ordre à
caractéristique double. II. An. Univ. "C.I. Parhon"
Bucuresti. Ser. Sti. Nat. 7 (1958), no. 17, §-21. (Romanian
and Russian summaries)

In an earlier paper [same An. 6 (1957), no. 15, 9-24;
MR 20 #3377] the author studied a fourth-order partial
differential equation in m -dimensional Riemann space
when m is an odd number. In the present paper the case
of an even m is discussed. As might be expected, the ex-
pansion of an elementary solution in powers of Γ now
contains logarithmic terms. If $m \leq 4$, the singularity is
purely logarithmic, while one part of the elementary
solution has a pole and another part a logarithmic
singularity if $m > 4$. A. Erdélyi (Pasadena, Calif.)

Title : Salinity Changes in the Rumanian Black Sea
Delta and in the Coastal Lakes Tekigyol,
Adzhidzhy, and a Nameless Lake.

Orig Pub: An Stiint Univ Iasi, 1957, No 1-2, Sec I, 287-294

Abstract: Measurements of Black Sea salinity from density
date made on 8-13 August 1954 (14.1-23.76 parts
per 1000) and 17-31 July 1956 (16.48-19.42 parts
per 1000) have shown fluctuations in the salinity
as a function of wave conditions and mixing with
Danube waters. The variation in the salinity of
the coastal lakes Tekigyol (14 August 1954, about
103 parts per 1000; 19-28 July 1956, 81.31-84.53

AUTHOR: Antokhin, Yu.T.

TITLE: On the Dirichlet problem for an equation of second order and
of elliptic type in an unbounded domainPERIODICAL: Referativnyy zhurnal, Matematika, no. 7, 1962, 51,
abstract 7B250. ("Tr. Matem. in-ta AN SSSR", 1961, 60, 22-41)

TEXT: In the first two paragraphs the growth of the solutions of

$$Lu = \sum_{i,j=1}^n a_{ij}(x) \frac{\partial^2 u}{\partial x_i \partial x_j} + \sum_{i=1}^n b_i(x) \frac{\partial u}{\partial x_i} + c(x)u = f(x), \quad (1)$$

where $x = (x_1, x_2, \dots, x_n)$, is estimated (for bounded and unbounded domains). Furthermore, a class of equations and domains is given for which the Dirichlet problem can be considered without restriction of the order of growth of the coefficients of (1). Let G be an unbounded domain

Card 1/4

C111/C222

in the halfspace $x_n \geq 0$ with the regular boundary Γ , where a part of Γ is assumed to lie in the plane $x_n = 0$. Each $(n-1)$ -dimensional plane perpendicular to the axis x_n is assumed to intersect $G +$ in a bounded closed set S_{x_n} . Let $a_{ij}, b_i, c < 0$ possess third, second and first derivatives, respectively, which are continuous in G . The Dirichlet problem for (1) with $f(x) = 0$ in G is formulated as follows: A regular solution of (1) in G with the boundary condition $u|_{\Gamma} = \psi(x)$ is sought in the class of the functions $u(x)$ for which

$$\max_{x \in S_{x_n}} |u(x)| = \psi(x_n)$$

Under the above mentioned conditions it is proved that the Dirichlet problem formulated above possesses a unique solution which depends continuously on $\psi(x)$, where this solution can be determined in each bounded subdomain $G' \subset G$ with an arbitrary ε -exactness by solving the

Card 2/4

On the Dirichlet problem ...

S/044/62/000/007/028/100
C111/C222

Dirichlet problem in a certain domain G' which is determined by ψ and ζ . In the third paragraph the generalized solution of the Dirichlet problem is sought for the equation

$$\Delta u(x) + c(x)u(x) = f(x), \quad x = (x_1, x_2, \dots, x_n) \quad (2)$$

in an unbounded domain G_1 . This problem is solved with the aid of potentials. It is assumed that G_1 with the boundary Γ_1 lies in $x_n \geq 0$, where the points of G_1 which are sufficiently far from the origin of coordinates lie in the cone $x_n = R|x|$, $R > 0$. By the generalized solution of (2) one understands a function $u(x)$ continuous in $G_1 + \Gamma_1$ for which the relation

$$\int_{G_1} u(x) \Delta \varphi(x) dx + \int_{G_1} c(x)u(x)\varphi'(x) dx = \int_{G_1} f(x)\varphi'(x) dx$$

is satisfied for each finite function $\varphi(x)$. The following theorem is proved: Let $D = \inf_{x \in \Gamma_1} |x| > 0$ and let $c(x)$ and $f(x)$ be continuous in

Card 3/4

On the Dirichlet problem ...

S/044/62/000/007/028/100
C111/C222

$G_1 + \bar{r}_1$, where

$$c(x) \leq \bar{K}_2 / |x|^{2+\xi}, \quad f(x) \leq K_1 / |x|^{1+\xi},$$

where $0 < \epsilon < 1$, $0 < \xi$, $\epsilon + \xi \leq 1$, K_1 , \bar{K}_2 -- constants. If then $c(x) = 0$ and if D is sufficiently large, then in the class of the functions for which

$$u(x) \leq K_2 |x|^{1-\epsilon+\xi}, \quad 0 < \epsilon_1 < \epsilon, \quad 0 < \xi_1 < \xi$$

there exists a unique generalized solution of the Dirichlet problem for (2) and the condition $u(x)|_{\bar{r}_1} = 0$.

There are some inaccuracies (especially in the introduction) which complicate the reading but do not influence the results obtained.

AUTHOR: Antokhin, Yu. T.

TITLE: Dirichlet's problem for a second-order equation which is of the elliptic type in an unbounded region

SOURCE: Akademiya nauk SSSR. Matematicheskiy institut. Trudy. v. 60, 1961, 22 - 41

TEXT: The author studies the equation

$$\mathcal{M}u = \sum_{i,R=1}^n a_{iR}(x) \frac{\partial^2 u}{\partial x_i \partial x_R} + \sum_{i=1}^n b_i(x) \frac{\partial u}{\partial x_i} + c(x)u = f(x) \quad (1)$$

in an unbounded region G which lies in the semi-space $x_n > a > 0$. The intersections of G and each subspace $x_n = \rho$ are assumed to be bounded.The operator \mathcal{M} is of the elliptic type. First, the author derives some theorems on the growth of regular solutions u of Eq. (1). He shows that $M(\rho) = \max|u(x)|$ (the maximum taken over the intersection of G and the subspace $x_n = \rho$) will be a monotonic and convex function if the coeffi-

Dirichlet's problem for a second-order... B112/B125

cients b and c are definite functions, and if the sign of f is the same as that of u. Then, the author shows that Dirichlet's problem for Eq. (*) can be solved under certain conditions which must be fulfilled by operator \mathcal{M} and region G. The set of all solutions u is contained in a class of functions described by the condition $\max |u(x)| = o(x_n)$ (the maximum taken over the closure of the intersection of G and an arbitrary subspace $x_n = \text{const}$). Finally, the author solves the equation $\Delta u + cu = f$ by means of generalized functions u. Professors L. D. Kudryavtsev and A. V. Bitsadze are thanked for assistance. TITLE: Some problems of the analytical theory of equations of the first kind

SOURCE: Differentsial'nyye uravneniya, v. 2, no. 2, 1966, 226-240

TOPIC TAGS: linear equation, Fredholm equation, operator equation, Hilbert space

ABSTRACT: The author studies the problem of solving equations of the first kind
 $Ax = f$,
(1)
where x , f are elements of a Hilbert space, and A is the linear operator for which
0 (zero) serves as a point of the spectrum. It is assumed that the solution exists
and that it is unique, and that A is an unbounded self-adjoint operator. The paper
presents formulas for the solution of Eq. (1) obtained under the assumption that f
belongs to the domain in which the operators A , A^2 , ..., are defined, and under certain
less stringent limitations. Solutions are in the form of series in $A^n f$ elements the
theory of which is similar to the theory in eigenvector expansion. The accuracy
conditions for the solution generating formulas and the estimate of series conver-
gence are also given. The solution of Eq. (1) is related to the stabilization problem
of parabolic equations and the study is extended to those equations of the second kind
which are in a certain sense close to Eq. (1) (e.g., the Fredholm equation $x - \lambda Ax = f$)

Card 1/2

with λ not an eigenvalue). The a priori estimate of the solutions of Eq. (1) is investigated and for certain operators A another operator B is established such that $(Ax, Bx) > 0$ for a sufficiently wide class of element x. This inequality yields a priori estimates, e.g., for the Helmholtz equation in an unbounded region. Orig. art. has: 96 formulas.

TITLE: Certain incorrect problems of the potential theory

SOURCE: Differentsial'nyye uravneniya, v. 2, no. 4, 1966, 525-532

TOPIC TAGS: elliptic differential equation, parabolic differential equation,
Dirichlet problem, Cauchy problem, potential theorem

ABSTRACT: Several incorrect problems appearing in the theory of elliptic types of equations (Cauchy and Dirichlet problems) are investigated in conjunction with attempts to extend the application range of a method developed during the study of inverse problems of the Newtonian potential theory. The paper covers the nonuniqueness of the Dirichlet problem solution for elliptical systems and the Cauchy problem for elliptical and parabolic equations with analytic coefficients. Results show that certain important incorrect problems with "large perturbations" reduce simply and by a uniform method to analogous problems involving, however, "small perturbations." Orig. art. has: 37 formulas.

TITLE: Underwater gas arc cutting of metals

PERIODICAL: Svarochnoye proizvodstvo, no. 2, 1963, 27 - 28

TEXT: Special tests have been carried out at VNIIAVTOGEN in 1961, to study the possibility of using gas arc cutting for underwater metal cutting. The УДР -2М (UDR-2M) cutting device was used in a 140-liter water container. The auxiliary arc was excited, after immersing the cutter into the water, or in the air. The second method proved more satisfactory, since the service life of insulation bushings was increased. Visual observations showed that the burning of the arc was sufficiently stable. However, the cutting ability of the arc was less efficient in water than in air. The velocity of the process was reduced by 40 - 50% when cutting up to 30 mm steels in water. The effect of the gas upon the cut surface was studied with several gases and mixtures. The cutting speed was 57 mm/min for argon; 295 for argon with hydrogen; 255 for argon with nitrogen; 275 for nitrogen and 255 mm/min for nitrogen with hydrogen. Although highest cutting efficiency is obtained with an argon-hydrogen mixture, the qual-

Card 1/2

Underwater gas arc cutting of metals

S/135/63/000/002/009/015

ity of cut surfaces is best when using the nitrogen-hydrogen mixture. The gas-arc cutting method is more economical than the existing conventional methods. Further research should be directed to the development of special underwater cutting equipment. There are 5 figures and 1 table.

PHASE I BOOK EXPLOITATION

SOV/1639

Polietilen nizkogo davleniya (Low-pressure Polyethylene) Leningrad,
Goskhimizdat, 1958. 90 p. (Series: Novyye plasticheskiye massy) 10,000
copies printed.

Ed. (Title page): N.M. Yegorov; Ed. (Inside book): Ye. I. Shur;
Tech. Ed.: Ye. Ya. Erlikh.

PURPOSE: This booklet is intended for mechanics, engineers and technicians in chemistry, petroleum technology, foods, pharmaceuticals, electrical engineering, battery manufacturing, radio engineering, automobile manufacturing, high-frequency engineering, television, communications, machine- and ship-building, aviation, construction and other branches of industry employing plastic materials.

COVERAGE: The booklet describes a new material: polyethylene produced at low pressures. Its industrial preparation and properties are described along with methods of making articles from this material and its application in building technology, medicine and other branches of science. The booklet was compiled by personnel of the Scientific Research Institute for Polymerized Plastics:
Ch. I.: I.N. Andreyeva, Z.V. Arkhipova, Ye.V. Veselovskaya, A.A. Levina;

Ch. II.: I.N. Andreyeva, Ye. M. Antokol'skaya, Z.V. Arkhipova, N.P. Lazareva, R.I. Sashin, S.S. Khin'kis, and P.N. Shcherbak; Ch. III.: I.S. Gerbil'skiy, G. Ye. Lyandzberg, G.V. Paramonkova and A.L. Pechenkin. There are no references.

TABLE OF CONTENTS:

Foreword	3
Introduction	4
Ch. I. Preparation of Polyethylene at Low Pressures	7
Polymerization	7
Washing polyethylene from catalyst residues and regenerating the solvent	11
Ch. II. Properties of Polyethylene	14
Physicochemical properties	14
Wettability	14
Chemical stability	25
Dielectric properties	26
Dielectric constant and dielectric loss	28
Gord 2/4	28

Low-pressure Polyethylene

SOV/1639

Resistivity and electric strength	3
Aging of low-pressure polyethylene	43
Ch. III. Manufacture of Polyethylene Articles and Their Fields of Application	
Die casting	55
Extrusion method of processing	56
Coating of conductors with polyethylene insulation	61
Processing low-pressure polyethylene by press forming	70
Applying protective coatings of low-pressure polyethylene to metal parts by fusion	71
Welding plates and pipes of low-pressure polyethylene and the formation of sheets (bending operations)	76
Welding sheets and plates	77
Welding pipes and welding-on flanges	78
Making T-joints by welding pipes at right angles	80
Length-wise welding of tubing from sheets of low-pressure polyethylene for ventilation and other purposes	83
Bending low-pressure polyethylene sheets and plates to a given angle	84
Welding low-pressure polyethylene parts with a rod and employing a stream of hot air or nitrogen	86
Card 3/4	87

TITLE: The change in number of SH-groups in nuclear proteins of liver cells from irradiated rats

PERIODICAL: Biokhimiya, v. 27, no. 4, 1962, 685-688

TEXT: The changes in the SH-group content of the globulin, deoxyribonucleoprotein and the "acidic protein" fractions of rat liver cell nuclei resulting from X-irradiation were studied. It was hoped that identification of the protein fraction the SH-content of which is most strongly affected by irradiation might shed some light on the antimitotic effect of ionizing radiation. White rats, weighing 180-200 g each were X-irradiated with the PYM-3 (RUM-3) apparatus under the following conditions: 185 kv, 15 ma, 1 mm Al and 0.5 mm Cu filters, dose rate - 55 r/min, total dose 1500 r. All the control rats irradiated under these conditions died within 4 days after irradiation. The experimental rats were killed 30 min, 1, 2 and 3 days after irradiation, the livers were perfused in situ with cold Ringer's solution followed by 0.25 M sucrose, removed and homogenized in 2.2 M sucrose. The cell nuclei were isolated and washed with 0.88 M sucrose. The purity of the nuclear preparation was checked microscopically after staining with methyl green-pyronine. The proteins were extracted with 0.14 M NaCl, 1.5 M NaCl and 0.025 N NaOH, consecutively, according to Zbarskii and
